

MarineF!ND

Marine Mapping Intelligence

FINDMaps is an authorized distributor of the OceanWise Marine GIS Data Sets. These will form the core of our new MarineFIND service.

Accurate and up-to-date marine spatial data has never been more important. The new Marine and Coastal Access Act has led to the emergence of an updated Marine Spatial Planning Environment. This means that commercial entities, local authorities and other groups will take on more responsibilities. These new requirements make rapid access to the latest Marine Spatial Data essential.

FINDMaps is a leader in the provision of geospatial data to a vast range of companies from sectors as diverse as Land Developers, Land Planners, Architects, Civil Engineers, Environmental and Geomatics companies.

The addition of the MarineFIND product, which has the extremely recent and accurate OceanWise datasets at its core, ensures that organisations have quick and easy access to INSPIRE compliant Marine Data.

Uniquely, for Coastal Zone Management Products, our clients can choose to incorporate our Marine Data with the most comprehensive range of Ordnance Survey, EA, BGS, Scottish Heritage, English Heritage and DEFRA datasets. These can be transformed into common horizontal and vertical datums to allow seamless analysis and an easily integrated workflow.

Core Products:

- Marine Raster Charts
- Marine Themes
- Marine Gridded Data (coming soon)
- Ordnance Survey Data
- Environment Agency Data
- BGS Data
- English Heritage Data/ Land Registry
- DEFRA Data
- Environmental Reports

Consultancy Services:

- WebGIS Consultancy
- GIS Consultancy
- Custom Map Generation
- Web Mapping Portals
- Open Source GIS Technology
- Project Management, Prince 2 and Agile
- Custom Spatial Databases
- Data Hosting and Data as a Service

MarineF!ND

Marine Mapping Intelligence

Our Marine Data Division is led by personnel with experience in Marine Spatial Planning, Hydrographic Survey and Coastal Zone Management. They have over 20 years experience in the Offshore, Coastal Survey, Airborne and Terrestrial Survey Markets.

FINDMaps is therefore ideally placed to assist with your Marine and Coastal data requirements, or to provide consultancy services.

Core Marine Datasets

Marine Raster Data:

Familiar nautical chart base maps, competitively priced and ready for immediate use in GIS. **Raster Charts** comprise the well-known and popular nautical chart series from the UK Hydrographic Office, supplied as image files for easy loading and use in GIS.

The data is supplied in GeoTIFF format as individual charts for different geographic areas at discrete scale levels. No additional software is required. Raster Charts are available worldwide subject to permissions granted by contributing nations.

Marine Themes:

Comprehensive, flexible and intelligent marine mapping at an attractive price. Marine Themes comprise authoritative data from the UK and other Hydrographic Offices, engineered into logical data layers for easy loading and efficient use in GIS.

- Elevation
- Shipwrecks and Obstructions
- Industrial Facilities
- Transportation
- Administrative and Management Units
- Geographical Regions

Marine Geology:

FINDMaps is able to integrate a variety of BGS Marine Geological data sets. Please contact us for further details.

Marine Gridded Bathymetry:

Coming soon.

Product Development

Over the coming months FINDMaps will be expanding the scope of our MarineFIND service.

Contact us for updates.

GIS Dataset Supply:

FINDMaps can immediately supply GIS compatible files for all UK waters. The geographic extent of data available will be expanded over the coming months. Additionally, FINDMaps can supply integrated terrestrial datasets on a common datum. Alternatively, subscribe to our pay per view service or our EnviroFIND service to access these datasets.

Web Data Service:

Coming soon

FINDMaps is able to provide quotations for Online Data Feeds of our Marine and Terrestrial Data to variety of clients. These data feeds are ideal for users planning to launch WebGIS applications or broadcast information via intranet sites. Contact us for more details.

Fully Integrated Web Data Services:

Coming soon

In the coming months, FINDMaps will be launching a fully integrated online MarineFIND service. This will facilitate simultaneous display of Marine and Terrestrial data sets, allowing the development of customized maps complete with annotations which can be viewed or printed.

Other Developments:

FINDMaps has the expertise to develop custom solutions for clients. Contact us to discuss your needs.
