Marine Mapping Intelligence

Web Based Marine Services-WMS

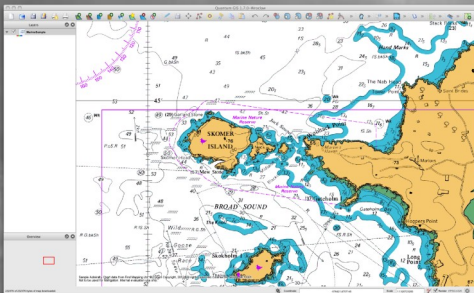

F!ND PROFESSIONAL MAPPING INTELLIGENCE

Currently using Third Party Software to View Marine Raster Charts?

We believe we have a more cost effective option for you

FINDMaps, is working to expand its range of options for Marine GIS data delivery. In order to achieve this we are launching a range of services specifically targeted at users who wish to be able seamlessly attach Marine Data into their GIS environment without have to set up extensive and expensive internal web services through GIS Software.

MarineFIND Charts Online (MCO)

A simple WMS service for your marine business needs.

Service generates significant savings to clients over traditional methods of data delivery whether it be whole raster charts or ARCS data.

Rapid data transformation capability and reduced in-house data storage and manipulation costs.

You gain access to multi-scale feeds which allows you to select the most appropriate for you viewing level.

If you wish to load just single charts then you can select from our WMS Charts-On-Demand Feed.

Both Feeds are included in a single price.

Two Options available:

View Only Service— ideal for background displays, planning etc.

View and Print Service— this gives the added benefit of being able to print out the datasets for incorporation in reports and other media products.

Domestic Pricing:

Our first feed to be released is our UK and Irish Waters Feed (see map above showing coverage).

Pricing on this feed is based on a floating access licence. Just decide how many users you plan to have accessing the feed and calculate the price from the table below:

	Annual Subscription Viewing Rights Only £	Annual Subscription Viewing and Printing Rights £
1-3 Users	500 per user	750 per user
3-5 Users	1400 Total	2000 Total
5-9 Users	2150 Total	3225 Total
10-15 Users	3225 Total	4850 Total
15-25 Users	4500 Total	6750 Total
25 +Users	Enterprise Rates	Enterprise Rates

** See Terms and Conditions Sheet.

- Designed for clients who wish access to just a small number of charts.
- Charging is based upon an initial setup fee then a per chart price for adding charts to the service.
- Broadcast via an internal Server system or via the Internet requires an Enterprise Licence, see us for details.
- This is a secure and protected web feed.
- Simple and Cost effective
- User friendly and easily incorporated into any GIS environment

Pricing:

	£
Initial Setup Fee	150.00 **
Monthly Cost per User	15.00
Cost Per Chart Added	5.00 View
	8.00 View/Print

** Includes 10 charts selected by the client.

Integrated ICZM Tools:

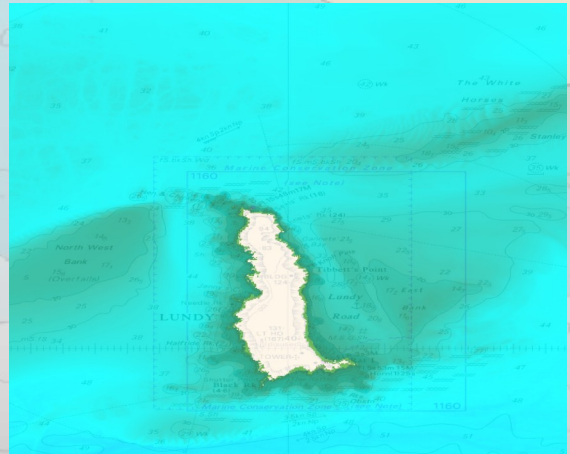

The Integrated Coastal Zone Management Directive, as it names suggests, recommends that the marine, coastal and terrestrial environments are considered as whole.

By combining Marine Data with our online EnviroFIND product clients are able to visualize and explore relationships between both terrestrial and marine data.

Bathy-On-Demand

Details:

- High resolution Bathymetry Rasters based upon Ocean-Wise Marine Themes Bathymetry.
- Available at 1 arc second and 6 arc second resolutions.
- 6 arc second resolution provided to subscribers of our MCO Service.

Easily combined with our MCO and COD services providing additional valuable insight into your marine operation or project.

Advanced Web Services

Tile Mapping Services & Web Sensor Services:

If you need optimized vector or raster marine data for your online mapping API or if you need to distribute and broadcast real-time and historical Oceanographic, meteorological or tidal data via the web then contact FINDMaps to explore the range of options available utilizing our web technology

Applications Include:

Windfarm Monitoring

Oil field Monitoring
